INFORMATIONS

SUBJECT: 'What do ESG commitments mean for public pensions?'

DATE AND TIME: Friday, 8 November 2024

In the face of ecological emergencies, which are themselves factors of social fragility, actors involved in transitions, in particular through their investments, can no longer ignore their responsibilities, especially in the public sphere. 20 years after the launch of the PRIs¹ and 10 years after the definition of the SDGs², where exactly does SRI³ stand? Has it become normalised in Europe, given the Sustainability Regulations? More specifically, what are the concrete choices that can be made by public sector pension institutions to generate a positive impact on the economy, society and the environment in relation to "the pursuit of the public good and a social Europe"⁴?
